

ACIC ActivityDetection-EDGE

The most comprehensive video analysis application for AXIS cameras and encoders

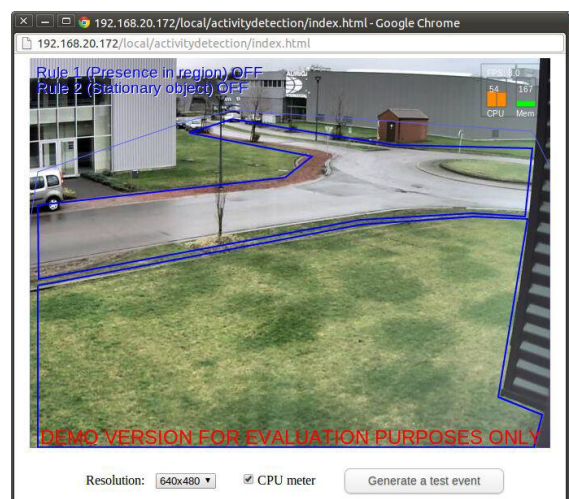

ACIC ActivityDetection for AXIS cameras and encoders is a video analysis program for security. It automates real-time video surveillance by triggering an alarm when an expected event is detected. The event can be a number of pre-defined actions of persons, vehicles or objects and, if it constitutes a threat, an operator can be alerted and video recording activated. ACIC ActivityDetection is a proven, high-performance program that adapts to environmental conditions to drastically reduce false alarms. The configuration interface and its assistant make ACIC ActivityDetection easy to install. Its advanced integration is possible with the main video management programs on the market.

Basic features

- Video analysis program on ACAP (Axis Camera Application Platform) compatible AXIS cameras and encoders
- The most comprehensive embarked application
- Real-time detection of the event (or rule) in question
- 8 rules can be configured at the same time: presence in a region, line crossing, crossing of a succession of lines, stationary object, object removed, object monitoring, motion detection
- Capable of configuring 8 lines and 8 detection regions
- Easy and fast calibration for 3D analysis and metric measurements
- Configuration from a standard web browser
- Real-time graphics decorations (OSD) visible in the video management programs and in the web browsers.
- Weather and temperature-resistant internal and external system
- Complementary camera anomaly stabilisation and detection modules

Applications

- Perimeter protection (fences, walled enclosures and building entrances, virtual perimeters,...)
- Surveillance of sensitive areas (car parks, logistics and port areas, railway lines and cuttings, open borders, etc.)

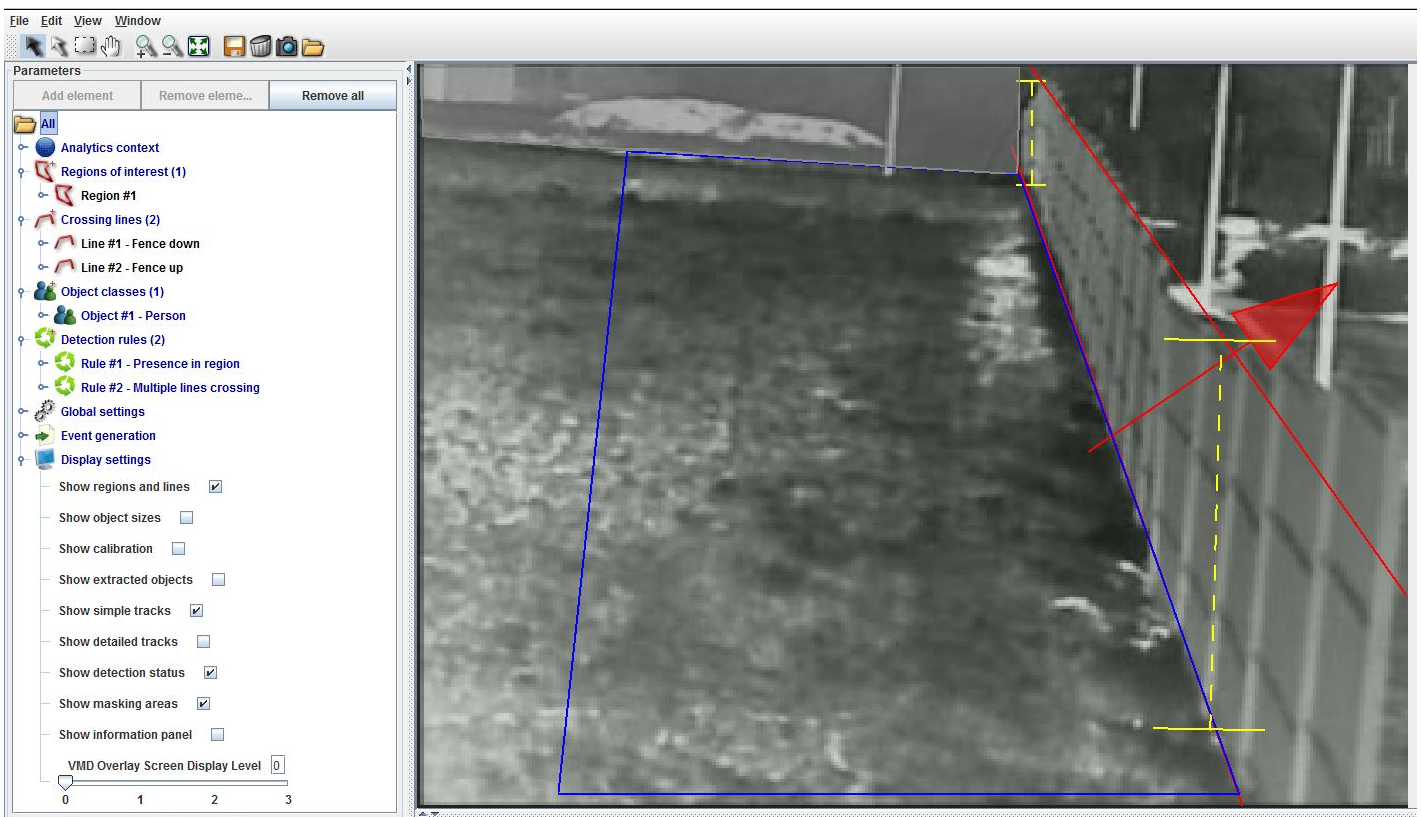

Competitive advantages

- High performances: low false alarm and detection failure rates
- Advanced integration (with OSD) with the market's leading VMS
- Easy, assisted configuration for fast and efficient implementation
- Video analysis application covering all automatic surveillance requirements
- Compatible Edge and Server versions that can be deployed together
- No server required. Integration with a VMS is direct

Benefits for the customer

- Improved security and more effective video surveillance
- A lower cost for the same level of security, thanks to the automation of surveillance
- No need to add cameras. They provide the display as well as the protection.
- The protected volume is greater than with other perimeter protection technologies
- With ACIC ActivityDetection-EDGE the camera itself becomes intelligent
- A server is no longer needed for video analysis

About ACIC

ACIC is a Belgian company that has been developing intelligent videosurveillance programs since 2003. ACIC provides the automated videosurveillance solution to meet your requirements, either based on your products or providing you with a tailored design. Thanks to the support of its technology suppliers, ACIC solutions apply to sensitive sites, transport infrastructures, shopping centres...

TECHNICAL SPECIFICATIONS	
Hardware Requirements	<ul style="list-style-type: none"> • AXIS ACAP cameras and encoders artp3 and beyond (list of support systems on www.acic.eu)
Software Requirements for the web-based configuration tool	<ul style="list-style-type: none"> • Internet Explorer 9 or higher • Firefox 16.0 or higher • Google Chrome 23.0 or higher • Java plugin 1.6 or higher
Supported Video Management systems	<ul style="list-style-type: none"> • Genetec Security Center 5.1 SR3 and 5.2 • Milestone XProtect (Corporate server 4.1a, Expert 6.0a, Enterprise 8.0b, Professional 8.0b, Express 1.1a, SmartClient 6.0) • SeeTec 5.4 • ExacqVision 4.0 • Axis Camera Station 3.0 • Eboo • SDK and HTTP API for third party integration
Video analytics functions (rules)	<ul style="list-style-type: none"> • Presence in a zone (sterile zone) • Virtual line crossing • Multiple lines crossing • Object removal detection • Stationary object detection • Advanced Video Motion Detection • Simultaneous processing of up to 8 rules
Application scenarios	<ul style="list-style-type: none"> • Perimeter protection • Sterile zone • Abandoned objects • Stopped cars • Object removal • Long-term object/human tracking
Specificities	<ul style="list-style-type: none"> • Easy to use calibration tool • Configuration wizard • Comprehensive and detailed graphical web display
Languages	<ul style="list-style-type: none"> • English, French
Licenses	<ul style="list-style-type: none"> • On-line and off-line licensing from sales@acic.eu or from the list of resellers www.acic.eu/en/partners/business-partners/ • Free trial licenses available from (www.acic.eu/en/company/contact.html)
